

MANUFACTURER'S CERTIFICATION STATEMENT

For Residential Energy Efficient Property Purchases

Under Internal Revenue Code § 25D, Residential Energy Efficient Property, the IRS allows a 30% federal Investment Tax Credit (ITC) for expenditures on a “qualified solar electric property” made during the taxable year. A “qualified solar electric property expenditure” is an expenditure for property which uses solar energy to generate electricity in a qualified dwelling unit located in the United States and used as a residence by the taxpayer.

Altenergy Power Systems USA Inc. and its affiliates (“APsystems”) design and manufacture solar power microinverters and hereby certify that the APsystems microinverter units labelled YC250, YC280, YC500 or YC1000 and all of the attached systems, accessories, cabling and communication products supplied by APsystems qualify as solar electric property.

APsystems does not provide tax advice. Taxpayers claiming a tax credit should consult a tax professional with any questions. APsystems is not responsible or liable for the taxpayer’s ability to receive tax credits. This certification is not intended to constitute legal or tax advice.

Under penalty of perjury, I declare that I have examined this certification statement, and to the best of my knowledge and belief, the facts presented are true, correct and complete.
